

# Lesson #16

## Solving inequalities step by step

### Individual Practice

Firstly, during yesterday's video of lesson #15, Grace found a mistake! I forgot the x on the right side of the inequality. Here is the correction :

p.56 in your notebooks, question g

$$x + x - 4 > 8 + x, x \in \mathbb{R}$$

$$2x - 4 > 8 + x$$

$$\begin{array}{rcl} -x & & -x \\ \hline \end{array}$$

$$x - 4 > 8$$

$$\begin{array}{rcl} +4 & & +4 \\ \hline \end{array}$$

$$x > 12$$

Today, there are 16 inequalities below that you are going to solve. Please make sure to show all your work. When you have finished, correct your answers with mine.

## Lesson #16

Solve the following inequalities on looseleaf. Label this page 57 for your notebooks.

- Remember:
1. Copy the inequality.
  2. Show all your work.
  3. Keep your  $>$ ,  $<$ ,  $\geq$  or  $\leq$  in a nice straight line.
  4. Circle your final answer
  5. Draw your solution set on a number line.

This is what I want to see for every question

ex.

$$2(x-4)+6 > (x-2)+5, x \in \mathbb{R}$$

$$2x - 8 + 6 > x - 2 + 5$$

$$2x - 2 > x + 3$$

$$-x \quad \quad \quad +x$$

$$x - 2 > 3$$

$$+2 \quad \quad +2$$

$$\boxed{x > 5}$$
